# How to turn on your controller in boot mode ?

Please follow this procedure on a Windows computer on which you have installed the ThrustmapperX app. You can find the link to download and install it below, in the "Software" tab :

https://support.thrustmaster.com/en/product/eswap-x-pro-controller-en/

Then, follow the steps below :

1) Disconnect your eSwap X PRO Controller from the computer.

2) Open the Firmware Updater. To open this utility software, click on the Windows logo, then in "All Programs" open the "Thrustmaster ESWAP X Gamepads" folder and then "Firmware Update" :

3) Press the "MAP" button, and keep it pressed

4) While maintaining this button pressed, plug your controller on one of your computer's USB.

5) Release the button

6) Your controller appears in the Firmware Updater window in boot mode. Click on "OK" to start upgrading.
